Turn technology into your ally in your inclusive classroom and use it to plan, instruct, assess, collaborate, and nurture the potential of your students. During this online inservice, you will explore an array of tools, including voice recognition programs, slant boards, online visual dictionaries, virtual manipulatives, and Web 2.0 tools. Participants will learn how to use technology to set up lessons that allow students to critically think, create, connect, and collaborate. Participants will see how to digitally increase students' academic, social, and communication skills. Participants will also learn how to be a more efficient teacher by using technology to organize, research, and document.

Participants will gain knowledge and skills in:

1. exploring how to effectively use technology to honor the inclusion principles in K-12 classrooms;
2. applying the appropriate technology platforms that align with each student's specially designed instruction (SDI) for academic, social, and functional skills;
3. learning collaborative, high-tech, individualized (IEP driven), low-tech and data driven technology applications for staff and learners;
4. compiling technology strategies and resources for educators of learners in K-12 inclusion classrooms.

This inservice is online from 9:00 a.m. to 11:30 a.m.
